LOADING BARS / PROGRESS BARS

Progress bars → Mechanism to indicate % task complⁿ;
→ help in perceptual reduction of wait time as system is busy processing user request;
→ provide feedback on status
egs: video streaming, mail loading, web loading

→ Determinate / Indeterminate loading bars

↓

visual indicn of % task left / complete

indicates only task progress with no quantum indication * load time 2 small / unknown choice

* < 3 seconds task — No progress bars better than having a progress bars

types - Early pause; late pause; slow warp, Fast warp; Accelerating (power), Deceleration (Inverse power), Fast power, Sfp

→ time perception ↓ by visual augmentation
like pulsating progress bars
" ribbed " "

- fast increasing pulses in pulsating bars and backward decelerating in ribbed "
  ↳ Better performance. than solid color PB

Ribbed better than pulsating

* 5 sec Std. solid clr bar = 5.61 of Blurd Rbar durations
* 15 { Sec " " " " = 16.75 R P Bar
  = 11.7% than actual durations.

Avg of 11% reds in perceived time

7/6/19

→ Movement of loading bar (Animation) illusionary effect
→ Variable rate of motion affects time perception

→ Time passing Conceived by users in a non linear way (∵ Non Linear bars pref)

→ "start slow and fast action @ end" better
→ Reorder process :- slow @ start
" transparency - Deception"

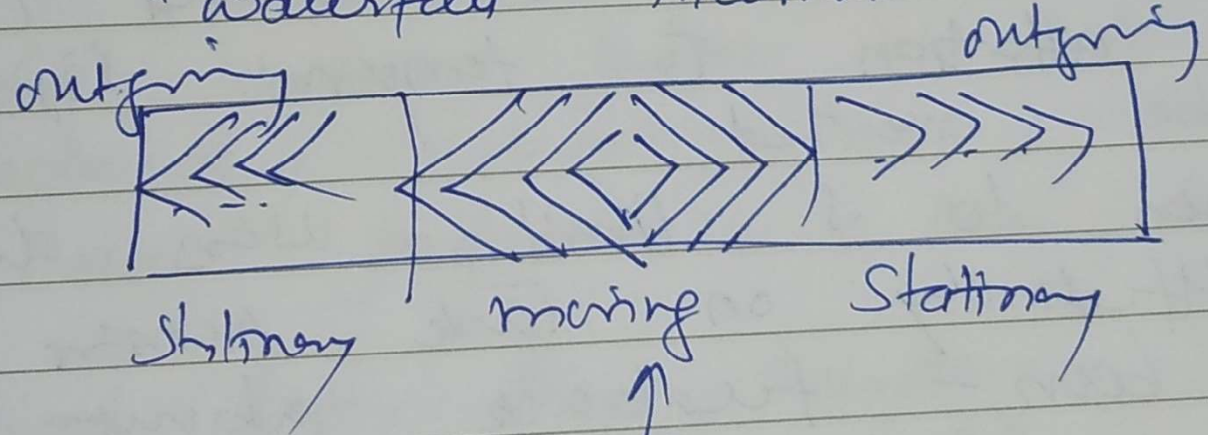
→ change small causes disenchantment = Watch/Clock effect

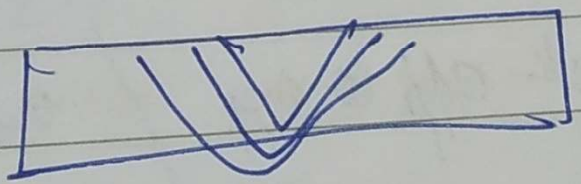
Long wait times — Continuous bar
Shorter wait duration — Numerical Representation;

→ Animations make us 10% faster
(Proposals)
→ Motion after effect :-

Motion after effect :-

moving stimulus for a long time — fixating on stationary " = stat. stimulus moves in opp dir
result of motion adaptation
("waterfall — rocks seem 2 move ↑)
"waterfall illusion"





Downward stripes
